
ONCE, WHEN THE STORAGE KEY IS ENTERED
A
Analyst enters the storage key
web/app.js
B
Get the 9 gold tables
from cloud storage, or from the copy saved in this browser
C
Create the tables in the browser
in-browser database (DuckDB-WASM); file and network access switched off
FOR EVERY QUESTION
1
Analyst asks a question
added to the conversation
2
Agent builds the request
instructions and core reference
every table's columns and their meanings
the whole conversation · 5 tool definitions
3
Send the request to the language model
nvidia/nemotron-3.5-lightning:free
4
Does the reply call any tools?
No
Yes
5
Agent runs each tool call
on the in-browser tables or the reference files
6
Add the results to the conversation
each result cut to at most 200 rows and 30,000 characters
7
12 requests to the model used?
No
Yes
8
Page shows the answer text
the queries are not shown
No tool call: the reply is the answer
next round
The 5 tools the model can call
run_sql runs one SELECT query on the tables
describe_table common values of each column
list_tables every table and column
read_reference one JSE reference topic
lookup_reject_codes reject code meanings
Chat page and analyst
Agent and language model
