TRADING CONFORMANCE ASSESSMENT

WKP | Client conformance result | Trading only | 09 September 2026

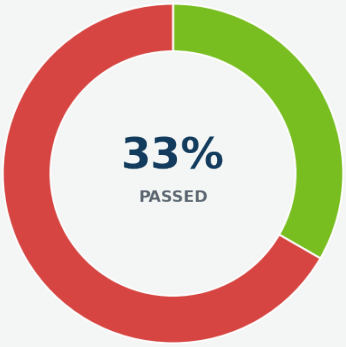

OVERALL RESULT	FAIL - 6 OF 9 REQUIRED TESTS NEED ACTION

9	9	3	6	33%	67%
REQUIRED TESTS	EVIDENCE PROVIDED	PASSED	FAILED	PASS RATE	RETEST / FIX

Executive decision

All nine mandatory, non-exempt trading tests contained client evidence. Three tests passed and six failed. The submission is not approved until all six failed tests are corrected and successfully repeated.

Scope: Trading only. Market Data, CTA/live-action tests and agreed exemptions are outside this assessment.

Assessment and specification controls

ASSESSMENT CONTROL	BASIS USED
Required tests	Only mandatory test cases without an agreed exemption are required.
Client evidence	Evidence is required for each test. Missing evidence is recorded as Not Tested and requires explanation and retest.
Message and field validation	Messages, permitted values and required fields are checked against JSE Volume 01E, Basic Native Trading Gateway v4.05.
Timing and correlation	Responses must meet the configured period. Applicable identifiers must correlate across request and response.
Pass criteria	Every configured check must pass. A missing response, missing field, unmatched identifier or invalid value causes failure.
Traceability	Each result shows the expected criteria, actual result and reason for Pass or Fail.

PASSED TESTS - CRITERIA AND OBSERVED EVIDENCE

Each result shows exactly what was checked and why the test passed.

TEST	T3-008 - Order Mass Cancel
REQUEST	Request and report at 13:35:39.3512
RESPONSE	The corresponding response message was evaluated against the configured timing, correlation and field rules.
CONFIGURED CRITERIA	Request and report at 13:35:39.3512; response <= 30 seconds; Client Order ID matches; Status is permitted.
ACTUAL OBSERVED	Elapsed 0.0000 seconds; Client Order ID D26090900000000LFM0QD matched; Status 7 = Accepted.
CONCLUSION	PASS. All configured checks passed.

TEST	T4-001 - Native Trading Recovery
REQUEST	Missed Message Request Ack within 1 second
RESPONSE	The corresponding response message was evaluated against the configured timing, correlation and field rules.
CONFIGURED CRITERIA	Missed Message Request Ack within 1 second; Status = 0 for each recovery request.
ACTUAL OBSERVED	Acknowledgements returned within 1 second and Status 0 was observed for all displayed requests.
CONCLUSION	PASS. All configured checks passed.

TEST	T21-001 - Liquidity Indicator
REQUEST	Execution response must contain the required Liquidity Indicator and satisfy the permitted value.
RESPONSE	The corresponding response message was evaluated against the configured timing, correlation and field rules.
CONFIGURED CRITERIA	Execution response must contain the required Liquidity Indicator and satisfy the permitted value.
ACTUAL OBSERVED	The configured Liquidity Indicator checks passed.
CONCLUSION	PASS. All configured checks passed.

FAILED TESTS - CRITERIA AND OBSERVED EVIDENCE

Each result shows exactly what was checked, why the test failed and what must be corrected.

TEST	T3-002 - Aggressive Limit Order
REQUEST	A Native Trading New Order was required with Order Type 2 and Time in Force 3 or 4 (IOC/FOK).
RESPONSE	A corresponding Execution Report was required within the configured period.
CONFIGURED CRITERIA	New Order: Order Type = 2; TIF = 3 or 4 (IOC/FOK). Execution Report within configured period; matching Client Order ID; Execution Type = F.
ACTUAL OBSERVED	No qualifying New Order and Execution Report pair satisfied all criteria.
CONCLUSION	FAIL. Repeat using IOC/FOK and capture the matching Execution Report.

TEST	T3-003 - Passive Limit Order
REQUEST	A passive Limit New Order was required during Continuous Trading without IOC/FOK.
RESPONSE	An accepted/new Execution Report and a later trade Execution Report were both required for the same order.
CONFIGURED CRITERIA	New Limit Order without IOC/FOK. Within 1 second: matching Client Order ID, Exec Type = 0, Order Status = 0 and Order ID populated. After the matching event: same Client Order ID and Order ID, Execution ID populated, Exec Type = F, Partially Filled/Filled, quantity > 0 and price no worse than limit.
ACTUAL OBSERVED	No sequence proved acceptance onto the book and subsequent execution.
CONCLUSION	FAIL. Repeat during Continuous Trading and capture both accepted/new and trade Execution Reports.

TEST	T3-006 - Order Modification
REQUEST	An active order was required, followed by an Order Cancel/Replace Request changing price or quantity.
RESPONSE	An amendment Execution Report was required within 1 second for the same order.
CONFIGURED CRITERIA	Establish an active order. Submit Order Cancel/Replace Request with a changed price or quantity. Within 1 second: correlated Client Order ID and Order ID, populated Execution ID, Execution Type = 5, and returned amended attribute equals request.
ACTUAL OBSERVED	Requests were found, but no amendment Execution Report was captured within 1 second.
CONCLUSION	FAIL. Repeat and verify Execution Type 5, identifiers and amended value.

TEST	T3-007 - Order Cancellation
REQUEST	An active order was required, followed by a cancellation request for the same Order ID.
RESPONSE	A cancellation Execution Report was required within 1 second.
CONFIGURED CRITERIA	Establish an active order. Submit cancellation for that Order ID. Within 1 second: matching Client Order ID and Order ID, populated Execution ID, Execution Type = 4 and Order Status = 4.
ACTUAL OBSERVED	Requests were found, but no cancellation Execution Report was captured within 1 second.
CONCLUSION	FAIL. Repeat and capture the correlated cancellation Execution Report.

TEST	T3-009 - Cancel on Disconnect
REQUEST	Five regular non-executable orders were required before the Native Trading TCP connection was terminated.
RESPONSE	After reconnecting, five cancellation Execution Reports were required through the Recovery Channel.
CONFIGURED CRITERIA	Five regular non-executable orders must be accepted and active. Force a TCP disconnect, reconnect and log on, recover messages via the Recovery Channel, then reconcile exactly five unique original Order IDs to five cancellation Execution Reports with populated Execution IDs, Execution Type = 4 and Order Status = 4.
ACTUAL OBSERVED	Client evidence was supplied, but no complete five-order cancellation reconciliation result was produced.
CONCLUSION	FAIL. Configure and rerun the full disconnect, reconnect, recovery and five-order reconciliation sequence.

TEST	T22-001 - Working Indicator
REQUEST	A New Order was required during Continuous Trading while the order status remained New.
RESPONSE	A matching Execution Report was required within 1 second with the Working Indicator present.
CONFIGURED CRITERIA	Submit a New Order during Continuous Trading. Within 1 second, receive an Execution Report with matching Client Order ID and CompID, Execution Type = 0, Order Status = 0, and Working Indicator present. For this scenario Working Indicator must equal 1 while Order Status is New. Missing fields are not permitted.
ACTUAL OBSERVED	Fail (0%). Client evidence states Working Indicator = 1, but the result did not show a complete matched New Order and Execution Report evaluation with the expected and actual values.
CONCLUSION	FAIL. Repeat and capture Client Order ID, CompID, Execution Type 0, Order Status 0 and Working Indicator 1 in the same matched result.

Approval condition

Repeat all six failed tests. Approval requires complete results and every configured criterion to pass.
